Professional Summary

Technology professional working in the field since 2023, with experience in QA, technical support, troubleshooting, and application validation. I have experience with problem analysis, manual testing, functional validation, support for international clients, and communication with different technical and business areas. I have experience with log analysis, XML configurations, root cause investigation, test case creation, and feature validation based on functional requirements and business rules. I also work with technical documentation and collaborate with Engineering teams in incident investigation and resolution, while continuously improving my knowledge in test automation with Robot Framework, Generative AI, LLMs, and prompting.

Professional Experience

SAP — SuccessFactors Support Engineer

Mar 2025 – Present

- Provide functional and technical support for SAP SuccessFactors Compensation, Variable Pay, and Reward & Recognition modules.
- Perform advanced troubleshooting through log analysis, XML configuration reviews, and system validations to identify root causes.
- Manage global incidents using ServiceNow, ensuring SLA compliance and continuous customer communication.
- Work directly with international customers in English, translating complex technical scenarios into clear and accessible guidance.
- Execute manual functional testing to validate features, fixes, and new implementations before system releases.
- Create structured test scenarios and test cases, also used as a foundation for future automation initiatives.
- Validate functionalities based on technical requirements and business rules.
- Collaborate with Engineering and Product Support teams on technical investigations and escalated cases.
- Produce technical documentation, KBAs, and internal materials related to features, troubleshooting, and technical debt.

W.A.T.I — Software Quality Analyst

Jan 2023 – Mar 2025

- Developed and executed test plans and test cases using TestLink.
- Worked with manual functional, regression, exploratory, smoke, and usability testing.

- Created test scenarios for new implementations and feature validation.
- Structured reusable test cases to support future test automation initiatives.
- Analyzed business requirements with a focus on defect prevention and quality assurance.
- Managed bugs and defect cycles through Jira, performing complementary validations with SQL.
- Supported developers in issue investigations through log analysis.
- Participated in the improvement and standardization of internal QA processes.
- Contributed to the onboarding of new team members.
- Represented the QA team during MPS.BR and CMMI certifications.

Education

Fadergs

Information Technology Management | Expected Graduation: 2027

Lutheran University of Brazil

Systems Analysis and Development | Graduated: 2024

Tools & Technologies

ServiceNow · Jira · TestLink · SQL · XML · Robot Framework · SAP SuccessFactors · KBA
